TURBO™
T O U C H

Metra introduces the very first TurboTouch kits. Once again, Metra has created the industry standard for integration of an aftermarket head unit into a vehicle. By using Metra's patented Auto-Detect protocol and the patent pending design for a touchscreen based vehicle interface, these new kits will lead the industry into the future.

The TurboTouch kits will display vehicle CAN Bus information on Metra's custom designed touchscreen and user interface. The touchscreen will provide factory HVAC control and personalization setting controls while maintaining steering wheel control functionality. The 8 backlit hard button's color can be changed to over 250 different color options.

Also available will be any of the vehicle's performance matrix information provided by the CAN Bus along with providing a convenient way to reset the check engine light.

The TurboTouch kits come complete with everything needed to install an aftermarket head unit. They are painted to match the factory look of the dash and are engineered, designed and built in the USA!
